Deluxe Door Details

With Sitesafe door and window assemblies you get the ability to secure your existing buildings with the same level of security that is fitted across our entire range of secure portable units - but at a fraction of the cost.

We can custom make to any size and to fit most types of building structures. All frames can be fixed into secure brick or blockwork and bolted or welded into steelwork.

Supplied in kit form, any R.A.L or B.S. finish can be applied to complement your existing on-site scheme.

We recommend installation is carried out by a qualified tradesperson.

INDUSTRIAL ASSEMBLIES

Personnel Door c/w Side Panels

Double Door

Personnel Door

Made to measure industrial doors supplied with:-
7-lever lock, allen key operation, anti-jemmy strips, 100mm x 100mm box section outer frame, 3-point internal locking

Industrial Window Details

Industrial Window

Made from 3mm precision welded steel plate and fitted with the Sitesafe three point internal locking system and Keyguard security these doors and windows present a formidable deterrent.

Solid hinges complement the locking system along with special tabs which prevent the door being forcibly wrenched from its frame. A tough lip runs up the sides and along the top to create a snug joint between door and frame and preventing forced access.

These products are designed to be fitted to existing buildings to further enhance your premises security. When you consider the alternatives the advantages of installing a comprehensive unit with superior features becomes clear.

Established in 1988, Cleveland Sitesafe Ltd developed from our own experiences as grounds maintenance contractors. Today, protection against theft and vandalism is an absolute necessity as is the ability to stand the rigours of everyday use yet only needing the minimum of maintenance.

SECURE YOUR BUILDINGS WITH SITESAFE DOORS & FRAMES

Interior Locking Bolts

The only dimensions we require are the height and width of the opening and the wall thickness - we take care of the rest.

To allow for inconsistencies we will reduce your supplied measurements by 5mm all round so please measure accurately. All dimensions will need confirming by email or fax when placing your order.

A fitting kit comprising of a 6.5mm masonry bit, Torx extension and 7.5mm masonry screws can be supplied as an optional extra. Please specify at time of ordering.

A hammer drill and a cordless drill/driver would be all that is required for your tradesperson to complete the installation.

From the home of quality secure storage systems comes an intelligent solution to one of the major problems of property security
